## 1.3 Change index

| date | Version | Amendment | Responsible |
|---|---|---|---|
| 25.07.2023 | 1 | New creation | Thomas Boland |

# 2 About these operating instructions

To ensure proper and safe use of the machine, follow the descriptions and recommended actions in these operating instructions.

Keep these operating instructions for future reference until the machine has been disposed of.

## 2.1 Purpose

These operating instructions contain information on the safe, trouble-free and economical use of the machine.

This information is intended for persons who perform tasks with or in connection with the machine.

The following table provides an overview of people and tasks.

| Person | Task |
|---|---|
| Operator | << Machine-specific >> |
| Occupational safety specialist | • Carry out a risk assessment<br>• Create operating instructions<br>• Instruct persons |
| Maintenance engineer | Maintenance of the mechanics |
| Qualified electrician (EFK) | Installation and maintenance of electrical equipment |
| Freight forwarder | External transport of the machine |
| Conveyor | Internal transport of the machine |
| Disposer | Dispose of the machine in a legally compliant, proper and professional manner |

## 2.2 Availability

The operator shall make these operating instructions or extracts thereof available to persons who carry out tasks with or in connection with the machine.

The operator must keep these operating instructions or extracts thereof within easy reach in the immediate vicinity of the machine.

If the machine is handed over to another person, the operator passes these operating instructions on to this person.

## 2.3 Warnings

These operating instructions contain warnings of residual dangers.

The categorisation of the warnings is based on the severity of the damage that can occur if the warnings are ignored and the recommended actions are not followed.

### 2.3.1 Warning words and warning colours

Warnings are introduced with one of the following warning words and marked with a corresponding warning colour.

| Warning word | Meaning | Warning colour |
|---|---|---|
| DANGER | Consequence of non-compliance:<br>Death or serious injury. | GEFAHR |
| WARNING | Consequence of non-compliance:<br>Death or very serious injuries possible. | WARNUNG |
| CAUTION | Consequence of non-compliance:<br>Serious or minor injuries possible. | VORSICHT |
| NOTE | Consequence of non-compliance:<br>Material damage or environmental damage possible. | HINWEIS |
| SAFE HANDLING | Implement the following instructions. | - |

### 2.3.2 Structure

Warnings are structured according to the SAFE method:

| | |
|---|---|
| **S** | Warning word (DANGER; WARNING, CAUTION or NOTICE) |
| **A** | Type and source of danger<br>Description of the hazard and the cause of the hazard |
| **F** | Consequence<br>Description of the possible consequences of the hazard for humans, animals and the environment |
| **E** | Escape<br>Recommendations on how hazards can be avoided |

## 2.4 Symbols

The following symbols are used in these operating instructions.

### 2.4.1 Warning signs

The warning sign is a safety sign that warns of a risk or danger.

The following table provides an overview of the warning signs used and their meaning.

| Symbol | Meaning | Symbol | Meaning |
|---|---|---|---|
|  | Warning of electrical voltage |  | General warning sign |

### 2.4.2 Instruction sign

The instruction sign is a safety sign that prescribes certain behaviour.

The following table provides an overview of the instruction symbols used and their meaning.

| Symbol | Meaning | Symbol | Meaning |
|---|---|---|---|
|  | Wear safety shoes |  | Use protective clothing |

# 3 Description of the machine

This section contains information on understanding the machine.

## 3.1 General description

### General description of the product

The machine (the Negative pressure unit) was designed and built by the company deconta GmbH, Im Geer 20, 46419 Isselburg.

Negative pressure unit for filtering asbestos-contaminated room air via a 2-stage filter unit. The built-in HEPA filter fulfils the requirements of EN 1822 class H 13 or H 14.

**Procedure for carrying out the risk assessment for machinery**

- Language of the risk assessment: German
- Risk assessment: EN ISO 12100 Safety of machinery - General principles for design - Risk assessment and risk reduction, three-stage iterative process for risk reduction in conjunction with Machinery Directive 2006/42/EC, Annex I, first general principle
- Risk assessment: DIN ISO/TR 14121-2 Safety of machinery - Risk assessment - Part 2: Practical guide and examples of procedures, 6.3 Risk graph; Determination of the required performance level (PLr): EN ISO 13849-1 Safety of machinery - Safety-related parts of control systems - Part 1: General principles for design; Determination of the SIL (Safety Integrity Level): EN 62061 Safety of machinery - Functional safety of safety-related electrical, electronic and programmable electronic control systems

## 3.2 Scope of delivery

The scope of delivery of the machine includes the following items:

- Negative pressure unit smart dec
- These operating instructions
- Suction adapter
- Sealing plugs

## 3.3 Return delivery after termination of a rental

For the protection of our customers and in accordance with the dangerous goods transport regulations, we must insist on the following return delivery conditions:

- As listed above
- Thoroughly cleaned (ready for use)
- Free from any adhesive residue
- Without residual fibre bonding
- Without filter
- Without damage

## 3.4 Operating modes

### 3.4.1 Available operating modes

#### Type of utilisation

The machine is intended exclusively for use in the following types of utilisation.

Use for other types of utilisation is not in accordance with the intended purpose.

**User groups**

- Commercial users

**Utilisation environment**

- outdoors
- on roofed areas
- in rooms closed on all sides

#### Operating modes

Operating modes for use:

- Automatic mode (SRE connect version only)
- Manual operation

## 3.5 Interfaces

This section contains information about interfaces.

The following interfaces are available on the machine:

- Human - product: Control panel, touchscreen
- Product - power supply: Electrical power supply 230 V
- Product - waste products: Connection piece for clean air
- Product - material feed: connection nozzle for contaminated air
- Product - building: feet or castors

## 3.6 Type plate

The rating plate contains information for identifying the machine.

### 3.6.1 Contents

The following illustration shows an example nameplate.

### 3.6.2 Execution

Aluminium plate, riveted

### 3.6.3 Position

Near the control panel on the outlet side.

## 3.7 Accessories

The following accessories are optionally available for the machine:

| Designation | Article no. | Illustration |
|---|---|---|
| Stacker device (single item) | BO21545 |  |
| Adhesive frame | BO23030 |  |

# 4 Technical data

## 4.1 Dimensions

Length x width x height 880 x 720 x 810 mm

## 4.2 Weights

Weight incl. filter 88 kg

## 4.3 Performance data

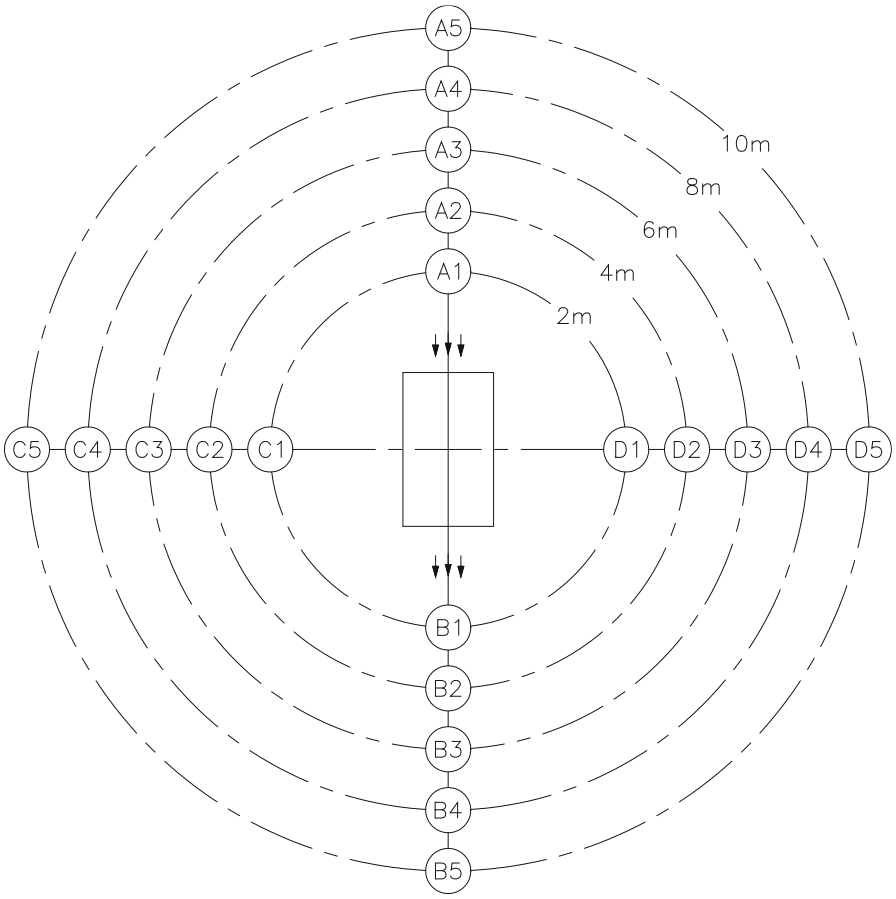
*All data on air performance and volume flow rates taking into account a measurement tolerance of ±15% in relation to the full-scale value, determined in a multi-point measurement procedure with a calibrated vane anemometer.*

| | |
|---|---|
| Air flow free-blowing max. | 7000 m³/h |
| Air flow rate with deconta H13 filter, max. | 5900 m³/h |
| Air flow rate with deconta H13 filter, pre-filter, max. | 5400 m³/h |
| Power connection | 230 V |
| Power consumption | 7,0 A |
| Engine power | 1.3 kW |
| Power cable type | H07RN-F 3G1.5 |
| Protection class | I |
| Protection class | IP 54 |
| Filter system | 2-stage |
| Pre-filter | EU 4 |
| HEPA filter | according to EN 1822 class H13 |

## 4.4 Ambient conditions

| | |
|---|---|
| Ambient temperature | 0 °C to +45 °C |
| Relative humidity | 70 % non-condensing |

## 4.5 Noise emission



**Status**:

Engine power 100%, outdoor area, values in dB (A)

| Device | A1 | A2 | A3 | A4 | A5 | B1 | B2 | B3 | B4 | B5 | C1 D1 | C2 D2 | C3 D3 | C4 D4 | C5 D5 |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| S 400 | 80 | 75 | 73 | 69 | 67 | 80 | 73 | 69 | 69 | 67 | 71 | 68 | 65 | 63 | 62 |

The sound level can be reduced by fitting a silencer, taking power losses into account.

## 4.6 Filter description / classification

A 2-stage filter combination is integrated in the appliance

**In detail:**

| **Pre- and intermediate filters** | **Pre-filter** |
|---|---|
| Quality class according to DIN 24185 / EN 779 | G4 / EU4 |
| Frame | Cardboard frame,<br>47 mm wide |
| Filter medium | Synthetic |
| Degree of separation (Am) | 90 % |
| Nominal volume flow: | 5400m³/h/m² |
| Nominal face velocity at nominal volume | 1.5 m/s |
| Initial pressure difference | 42 Pa |
| Recommended final pressure difference | 250 Pa |
| Temperature / humidity | 100°C/100% RH (relative humidity) |
| Filter dimensions (in mm): | 610 x 610 x47 |

**HEPA filter**

| | |
|---|---|
| Filter medium | Micro glass fibre paper |
| Potting compound | Polyurethane |
| Gasket | Polyurethane |
| Filter class | H13 or H 14 according to EN 1822 |
| Temperature / humidity | 70°C/100% RF<br>(relative humidity) |
| Filter dimensions (in mm): | 610 x 610 x 292 |
| Handle protection | on both sides |

# 5 Security

This section contains information on the protection of humans, pets, farm animals and the environment.

## 5.1 Intended use

The machine is intended exclusively for the following use:

### Intended use

The Negative pressure unit is used for filtering non-condensing room air contaminated with asbestos fibres, in the temperature range up to +45 °C, with exhaust air discharge to the outside.
When carrying out asbestos removal work in enclosed spaces, it is important to prevent asbestos fibres from leaving the removal area and thus posing a risk to people and the environment. For these reasons, removal areas (also known as contaminated areas) are separated from asbestos-free areas and kept under dynamic negative pressure using Negative pressure units.
An integrated filter system ensures that the concentration of asbestos fibres in the exhaust air is not exceeded. The exhaust air is channelled outside.
The appliance is not suitable for filtering flammable gases or dusts.

The user must comply with the operating parameters specified in the operating instructions. The appliance may only be used in accordance with its intended purpose. Any other use beyond this is not in accordance with the intended use. The user is liable for any resulting damage or injuries of any kind.

### Authorised persons

The following persons are authorised to handle the product:

- Specialised personnel
  - Task: Maintenance and servicing
  - Qualification: trained specialist personnel (fitters, industrial mechanics, electricians) with knowledge and experience in handling the machine
- Operating personnel
  - Task: Operation
  - Qualification: Training activity, information through operating instructions

Any other use is not in accordance with the intended use.

#### Field of application

The machine is intended for use in the following areas of application:

### Field of application

- Refurbishments

## 5.2 Misapplication

Use of the machine for the following purposes is not permitted:

### Reasonably foreseeable misuse

- Any application other than that described in the operating instructions
- Any use of the machine other than that described under "Intended use" without the written consent of the manufacturer
- Operation outside the technical limits of use
- Unauthorised modifications or conversions and tampering
- Use, installation, operation, maintenance or repair in a manner other than described
- Work carried out by unqualified personnel
- Use of unsuitable or incompatible materials, operating or auxiliary materials or accessories
- Non-compliance with safety and operating instructions, occupational safety and accident prevention regulations or relevant statutory regulations
- Failure to promptly rectify faults that could jeopardise safety
- Use of non-original replacement parts or accessories that are not equivalent in quality and function
- Operating the machine in a technically unsatisfactory condition, not being aware of safety and hazards and not observing all instructions in the documentation

## 5.3 Tasks and qualifications of staff

| Person | Task | Required qualification |
|---|---|---|
| Operator | << Machine-specific >> | Instruction, training |
| Occupational safety specialist | • Carry out a risk assessment<br>• Create operating instructions<br>• Instruct persons | Completed training as an occupational safety specialist with recent experience with machines |
| Qualified electrician | Installation and maintenance of electrical equipment | A person with suitable training, appropriate education, timely experience and knowledge of the relevant regulations that enables them to recognise risks and avoid hazards that may arise from electricity. |
| Freight forwarder | External transport of the machine | A person with suitable training, appropriate education, up-to-date experience and knowledge of the relevant regulations, who is able to transport machines safely off-site. |
| Conveyor | Internal transport of the machine | A person with suitable training, appropriate education, up-to-date experience and knowledge of the relevant regulations, who is able to transport machines safely within the company. |
| Disposer | Dispose of the machine | Qualified waste disposal company for legally compliant, proper and professional disposal of the machine |

## 5.4 Notes on occupational safety

The operator of the machine is responsible for implementing the obligations arising from occupational health and safety. The health and safety regulations of the country in which the machine is used apply.

The obligations include the following points:

- make these operating instructions or extracts available to persons who carry out tasks with or in connection with the machine
- Provide the applicable documents to these persons
- Instruction of persons with regard to the intended use and misuse
- Instruction of persons with regard to protective devices and supplementary protective devices
- Instruction of persons with regard to residual risks

This list is not exhaustive and does not claim to be complete.

# 6 Transport

This section contains information on external and internal transport of the machine.

Transport is the movement of the machine by manual or technical means.

## 6.1 Loss of warranty claims

The manufacturer's warranty is void in the following cases:

- In the event of modifications to the machine that have not been agreed with the manufacturer
- If the transport is not carried out properly

## 6.2 External transport

### 6.2.1 Transport space

Off-site transport takes place in public areas. The machine is transported from one location to another.

### 6.2.2 Legislation

The off-site transport of the machine is carried out in accordance with the legal regulations of the country in which the machine is transported off-site.

### 6.2.3 Qualification of staff

Persons transporting the machine outside the company must fulfil the following requirements:

| Person | Required qualification |
|---|---|
| Freight forwarder | Completed training in transport and experience in the external transport of machines |
| Logistician | Completed training and experience in the internal transport of machines |

### 6.2.4 Warning of residual risks

Risk of crushing: Wear safety shoes to protect limbs from being run over.

6.2.5 Means of transportation

A means of transportation that fulfils the following requirements is needed for safe external transport:

- The load capacity must be dimensioned so that the mass of the machine can be safely supported.
- The size of the transport surface must be dimensioned so that the machine can be parked safely on the transport surface without falling.

Machine may fall down due to unintentional change of position when loading and unloading onto/from a means of transportation.

## 6.3 Internal transport

6.3.1 Transport space

During internal transport, the machine is transported from one installation location to another on the company premises.

6.3.2 Legislation

The internal transport of the machine is carried out in accordance with the legal regulations of the country in which the machine is transported outside the company.

6.3.3 Warning of residual risks

Risk of crushing: Wear safety shoes to protect limbs from being run over.

6.3.4 Means of transport

A means of transport that fulfils the following requirements is needed for safe internal transport:

- The load capacity must be dimensioned so that the mass of the machine can be safely supported.
- The size of the transport surface must be dimensioned so that the machine can be parked safely on the transport surface without falling.

Machine may fall down due to unintentional change of position when loading and unloading onto/from a means of transportation.

# 7 Assembly

This section contains information on the safe installation of the machine.

The Negative pressure unit is delivered ready for operation ex works and is intended for immediate commissioning.

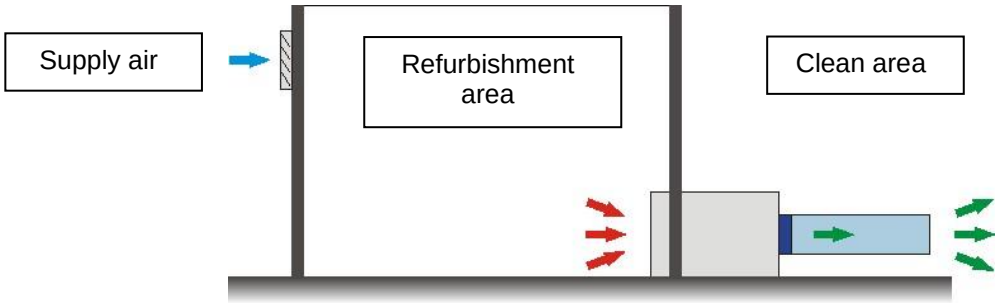
**Do not** operate the appliance if it is visibly damaged. Contact deconta GmbH immediately.

HINWEIS

**Please note: In principle, the Negative pressure unit can also be operated directly in the contaminated area (pressurisation technology prevents contaminated ambient air from entering the housing).**

**However, as the appliances are contaminated from the outside and therefore have to be thoroughly cleaned after the refurbishment is complete, use in contaminated areas should be avoided at all costs.**

- Integrate the appliance into the partition wall between the clean and refurbishment areas
- Insert approx. 100 mm into the renovation area
- Seal appliance with partition wall
- Route the exhaust air hose to the outside
- Ensure sufficient supply air in the refurbishment area



⚠ GEFAHR

**Never use the appliance without correctly installed filters that are approved for the respective requirement. Avoid blowing out unfiltered air.**

# 8 Operation

This section contains information for the safe use of the machine.

## 8.1 Qualification of staff

Persons using the machine must fulfil the following requirements:

| Person | Required qualification |
|---|---|
| Operator | Instruction, training by the manufacturer |

## 8.2 Warning of residual risks

Contact with wires of a damaged mains connection cable.

Touching machine parts that have become live due to faulty conditions.

**⚠ VORSICHT**

Damage due to unsuitable mains voltage.

The appliance can be damaged if it is connected to an unsuitable mains voltage.

Check whether the voltage specified on the rating plate corresponds to the local mains voltage.

**⚠ WARNUNG**

The following materials must not be filtered:

- Hot materials (smouldering cigarettes, hot ashes, etc.)
- Flammable, explosive, aggressive materials and dusts

## 8.3 Number of persons

One person is required to use the machine.

## 8.4 Tools required

No tools are required to use the machine.

## 8.5 Required equipment

No equipment is required to use the machine.

## 8.6 Negative pressure units with SE control unit

The Negative pressure unit is supplied with a manual stepless control for power regulation.

- Establish power connection
- Actuate controller

### 8.6.1 Room pressurisation

- Set the desired negative pressure at the supply air opening or on the infinitely variable regulator

⇒ Negative pressure too high: Open supply air opening or turn down appliance

⇒ Negative pressure too low: Close the supply air opening or regulate the appliance upwards

## 8.7 Negative pressure units with SRE connect control unit

IoT (Internet of Things) => Devices with SRE connect control can be remotely controlled and monitored with any internet-enabled PC, mobile phone or tablet.

For power regulation, the Negative pressure unit is supplied with a control unit via a touch display to measure and regulate the negative pressure and / or the volume flow.

The negative pressure is measured between the contaminated area and a reference point to be defined (neighbouring rooms) and maintained at the setpoint by continuous speed control of the electric fan.

The volume flow is measured in the device and kept at the setpoint by continuous speed control of the electric fan.

Manual control is also possible.

A filter sensor monitors the particle concentration in the exhaust air and triggers a visual and acoustic alarm if a value of approx. 100 particles per litre is permanently exceeded.

A necessary filter change is shown on the display.

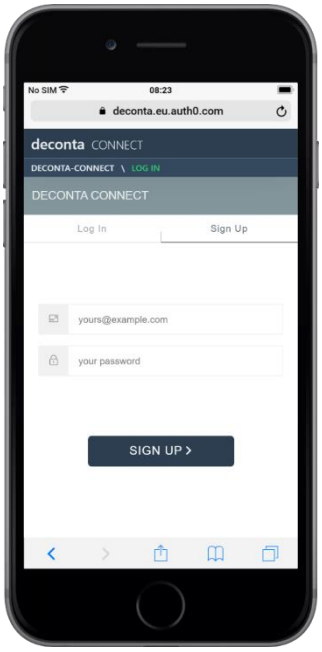
The connect functions are supported as standard in the following countries:

Albania, Algeria, Armenia, Aruba, Australia, Austria, Azerbaijan, Bangladesh, Belarus, Belgium, Bolivia, Bonaire, Bulgaria, Cambodia, China, Croatia, Curacao, Cyprus, Czech Republic, Denmark, El Salvador, Estonia, Faroe Islands, Finland, France, French Guyana, Georgia, Germany, Ghana, Gibraltar, Greece, Guadeloupe, Guyana, Honduras, Hong Kong, Hungary, Iceland, Indonesia, Ireland, Israel, Italy, Japan, Jersey, Kazakhstan, Kuwait, Kyrgyzstan, Laos, Latvia, Liechtenstein, Lithuania, Luxembourg, Macau, Macedonia, Malaysia, Malta, Martinique, Moldova, Mongolia, Montenegro, Nepal, Netherlands, Netherlands Antilles, New Zealand, Nigeria, Norway, Pakistan, Palestine, Panama, Papua New Guinea, Philippines, Poland, Portugal, Puerto Rico, Qatar, Romania, Russia, Saint Eustatius and Saba, Saint Martin (French part), Saint-Barthélemy, Serbia, Singapore, Slovakia, Slovenia, South Africa, South Korea, Spain, Suriname, Sweden, Switzerland, Taiwan, Tajikistan, Tanzania, Thailand, Tonga, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Kingdom, United States, Uzbekistan, Vietnam, Virgin Islands, U.S., Zambia

**All other countries not listed on request**

### 8.7.1 Create user account

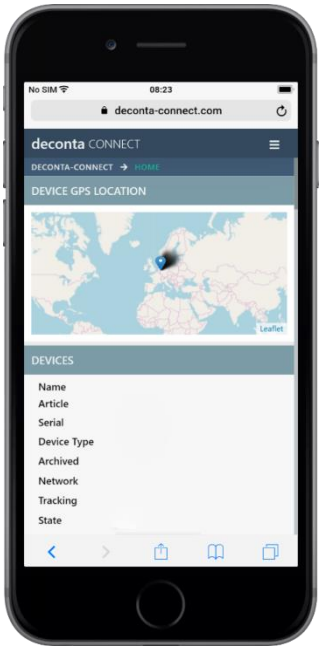
Open the page www.deconta-connect.com in your internet browser.



Tap on the "Sign Up" tab. Enter an e-mail address and your desired password.

The password must be at least 8 characters long and fulfil 3 of the following 4 criteria:

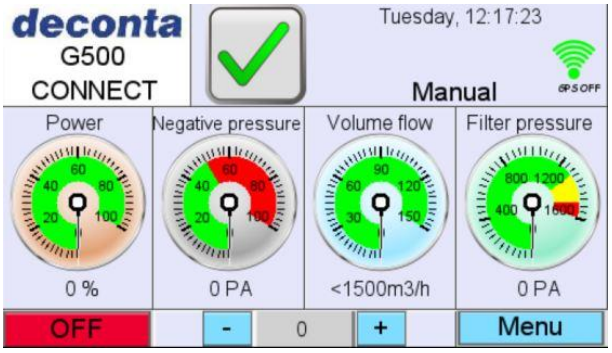
- at least 1 number
- at least 1 capital letter
- at least 1 lower case letter
- at least 1 special character.



You will see this page after successful registration.

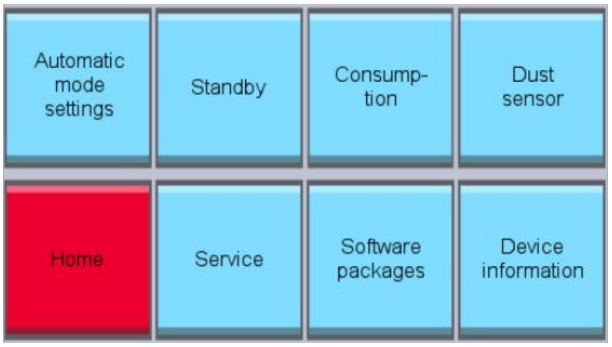
Any number of devices can now be assigned to the user account.

## 8.7.2 Add device to the user account

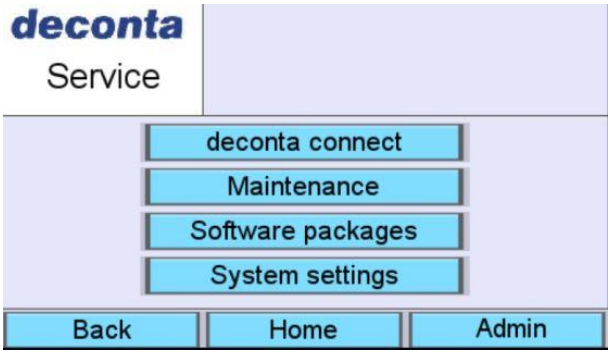


Switch on the device.

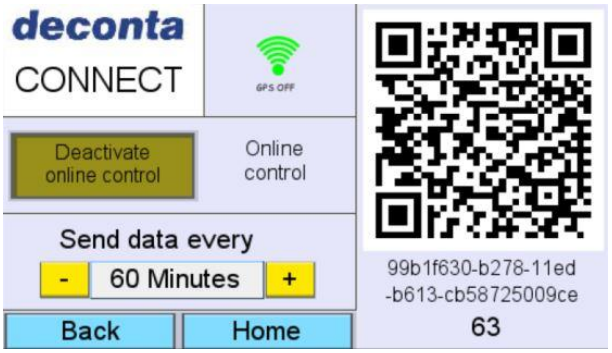
Tap on the "Menu" button.



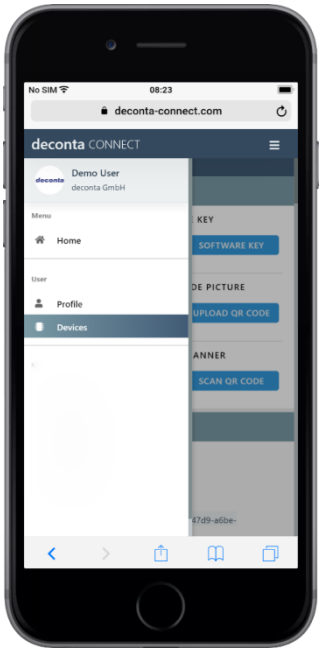
Tap on the "Service" button



Tap on the "deconta connect" button.

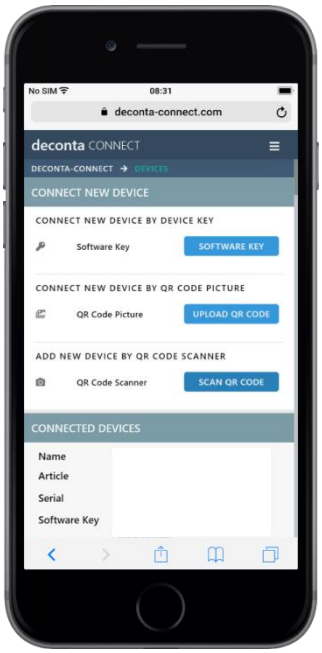


The page with a QR code and a key underneath is displayed.

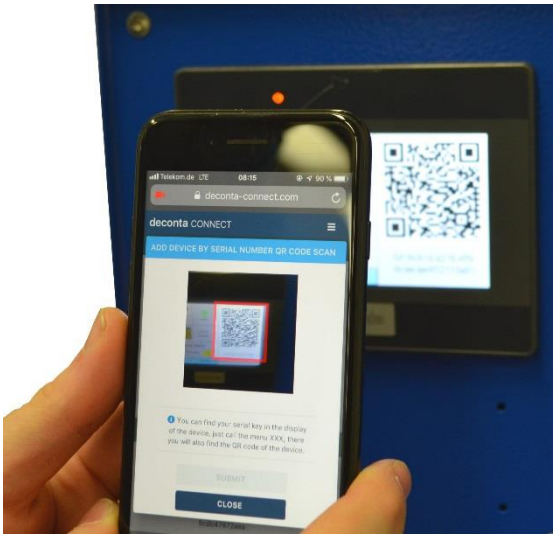


Log in to the connect page with your e-mail address and password.

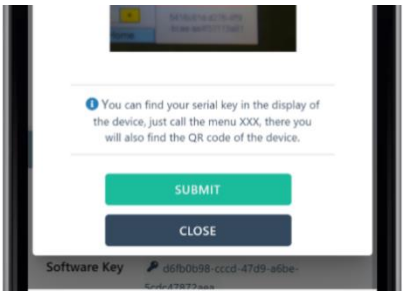
Tap on the menu icon and then on "Devices".



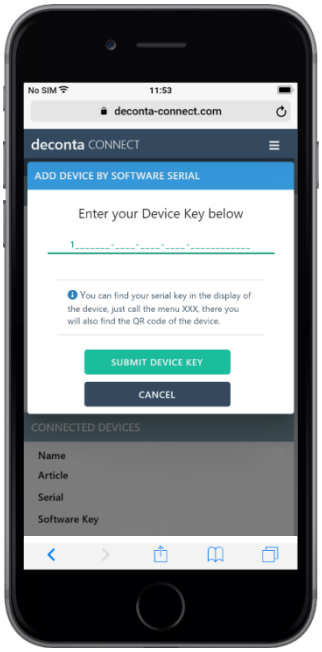
Tap on the "SCAN QR CODE" button (our recommendation) or alternatively on the "SOFTWARE KEY" button.



Scan the QR code shown on the device display.



If the QR code is recognised, the "SUBMIT" button changes to green. To add, tap this button and the device is now registered in your user account.



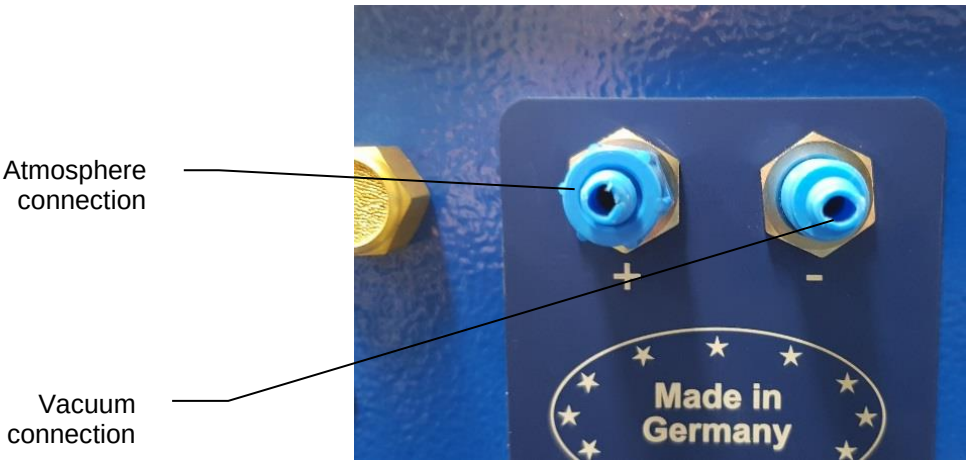
Alternative registration via the "SOFTWARE KEY" button

Enter the key that is displayed below the QR code on the device in the field provided and then tap the green "SUBMIT DEVICE KEY" button, the device is now registered in your user account.

### 8.7.3 Preparation

Determine the measuring point in the contaminated area and connect it to the negative pressure "-" connection using PE hose 8 x 1.

Determine the measuring point in the clean area (neighbouring rooms) and connect with PE hose 8 x 1 to the atmosphere "+" connection.

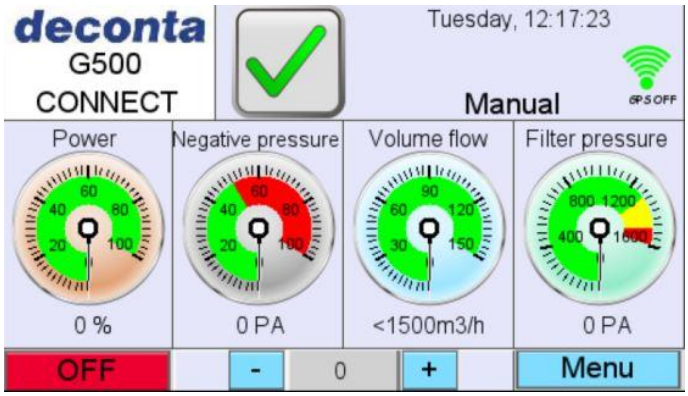


The control unit can be used in 2 different operating modes.

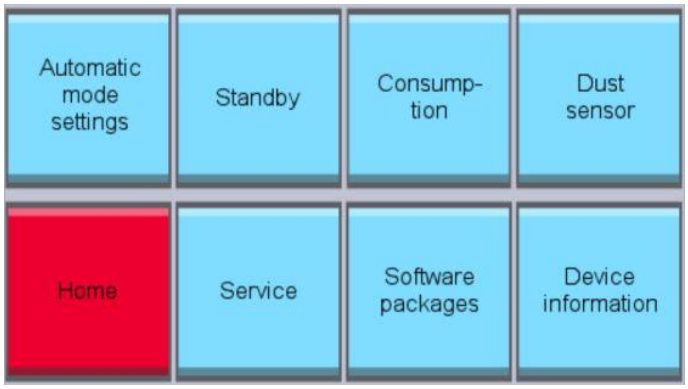
### 8.7.4 Manual operation

In manual mode, the fan power is set using the "-" and "+" buttons.

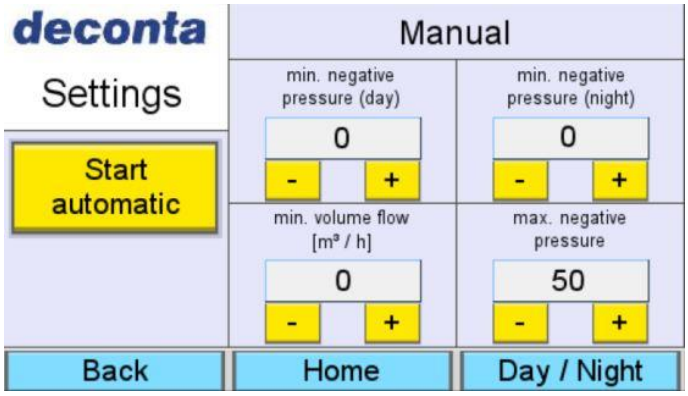
The display shows the power value in % (Power), the measured negative pressure in the contaminated area (Negative pressure) in Pa, the volume flow in m³/h and the filter pressure in Pa.



### 8.7.5 Automatic operation



To make the settings and switch automatic mode on/off, tap the "Menu" button. In the following menu, tap the "Automatic mode settings" button.



The following parameters can be set:

- Minimum negative pressure in day mode (min. negative pressure day)
- Minimum negative pressure in night mode (min. negative pressure night)
- Minimum volume flow in m³/h (min. volume flow)
- Maximum negative pressure (max. negative pressure)

Automatic mode is started by tapping the "Start automatic" button.

By comparing the setpoint entered with the permanently measured actual value, the speed of the fan is automatically adjusted, i.e. the fan automatically runs "up" or "down".

### 8.7.6 Day / Night settings (Day / Night)

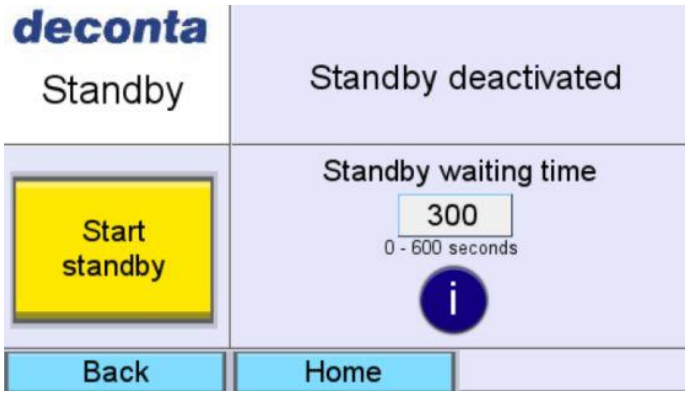
By selecting time ranges, you can set here on which days and at what time the value set in automatic mode for the minimum negative pressure in night mode (min. negative pressure night) is activated.

### 8.7.7 Standby mode

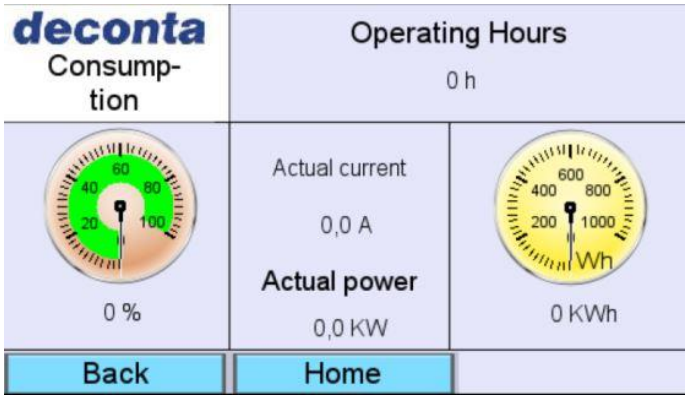
A Negative pressure unit with SRE connect control can be operated as a standby device (reserve device). If this function is activated, the device switches on automatically if the pressure falls below a previously defined negative pressure (e.g. if the actual Negative pressure unit fails).

Standby mode is switched on in the menu by tapping the "Standby" button.

A delay of 0-600 seconds for switching on can be entered in the Standby waiting time field.



### 8.7.8 Consumption



Left: The current power of the device is displayed here in %.

Top centre: Display of the current power consumption (Actual current) in A

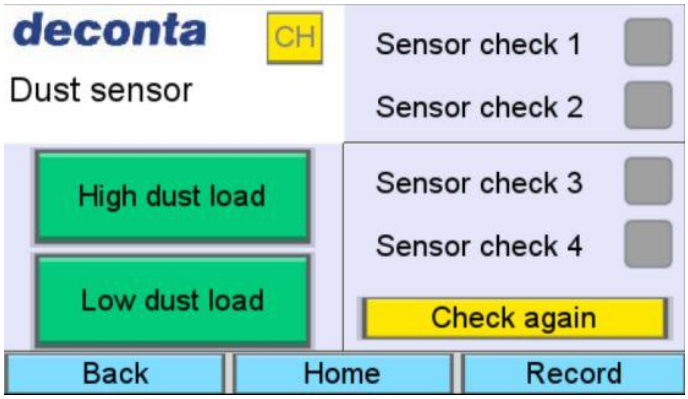
Centre bottom: Display of the current power (Actual power) in kW

Right: Display of Wh and below the total consumption in KWh

### 8.7.9 Dust sensor

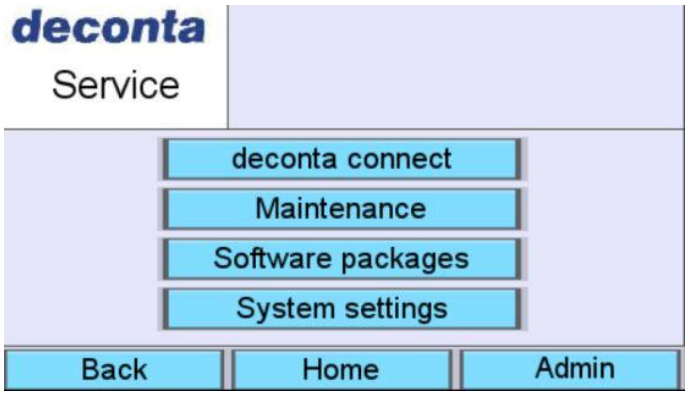
A filter sensor monitors the particle concentration in the exhaust air.

The functions and status of the filter sensors are shown on the display.



The measured values of the filter sensors can be displayed graphically using the "Record" button.

### 8.7.10 Service



deconta connect

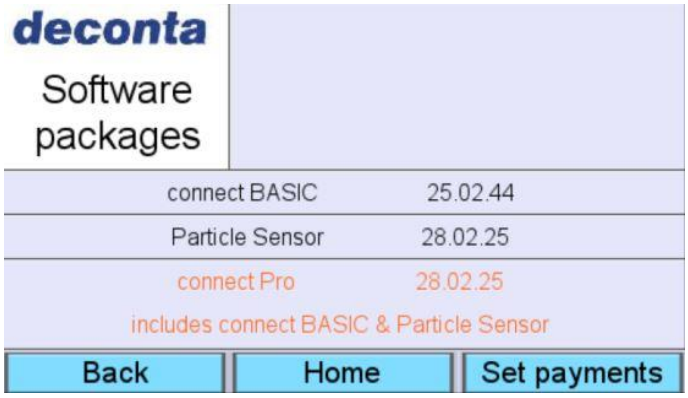
Assign device to a connect account, see 8.7.1.

Maintenance

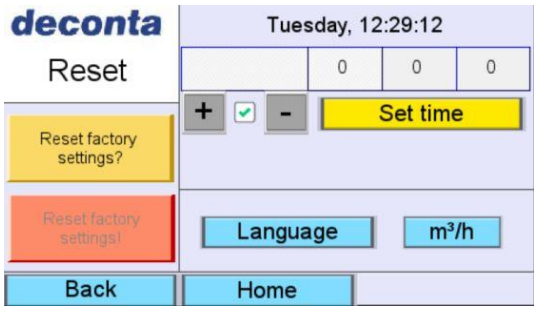
Settings in this menu can only be made by qualified deconta service partners.

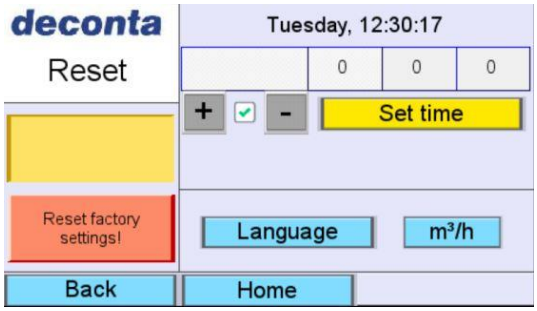
Software packages

Display of the booked options and the expiry date of the licences.



System settings





Setting the day of the week and time. These values are shown on the device display and are required for the Day / Night settings.

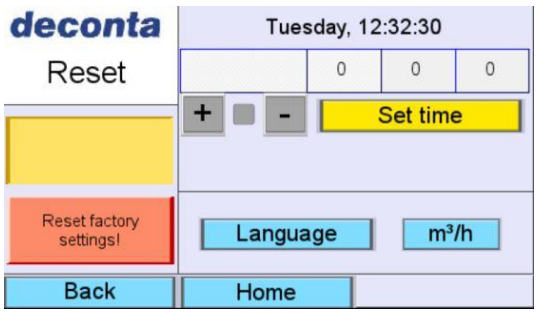
Data that is sent to the connect user account is displayed there in the set time zone (by default UTC ±0 = Coordinated Universal Time).

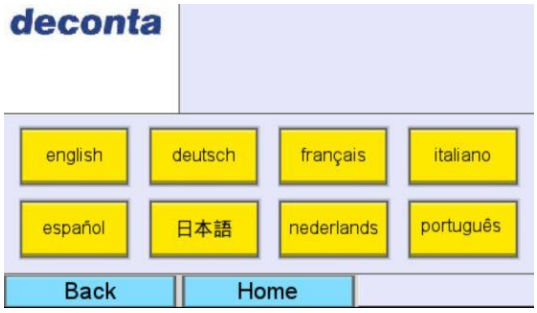
Tapping the yellow "Reset factory settings? (reset to factory settings?), the red "Reset factory settings!" button is activated.

**HINWEIS**

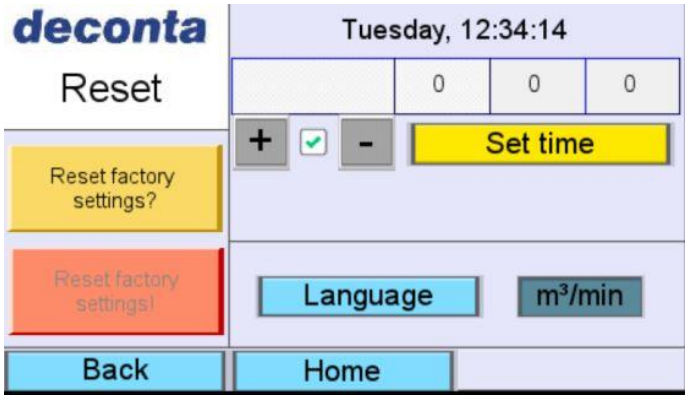
**Tapping this red button resets all settings to the factory settings!**

Setting the language. Tapping the "Language" button takes you to the menu for setting the display language. Selectable languages: English, German, French, Italian, Spanish, Japanese, Dutch and Portuguese.



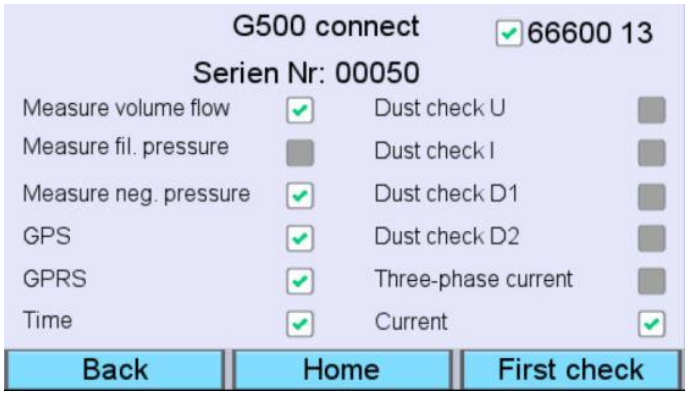


The unit can be changed to m³/min by tapping the m³\h button.



## 8.7.11 Device information (Device information)

Display of device information.



### 8.7.12 Alarms

Alarms are displayed visually via a flashing symbol on the main screen and an acoustic signal sounds at the same time. There are 3 different displays:

- Green tick: there is no alarm message

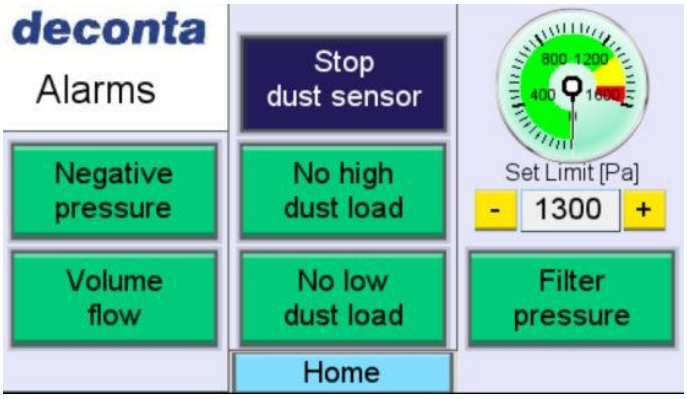
- Yellow bell: there was an alarm, but it no longer exists and has not yet been acknowledged

- Red bell: there is an acute alarm message

A submenu with more detailed information on alarms can be called up by tapping the button with the green tick, the yellow bell or the red bell.

Alarms are displayed with a red button.

Once the fault has been rectified, the alarm must be acknowledged by tapping the relevant button and the colour changes to green.



**Negative pressure:**

- the set target value for the minimum negative pressure could not be reached.

**Volume flow (volume flow):**

- the setpoint value for the minimum volume flow could not be reached.

**High dust load:**

- Filter sensor message for many particles within a short period of time

**Low dust load:**

- Filter sensor message for a few particles over a longer period of time

**Filter pressure (filter pressure):**

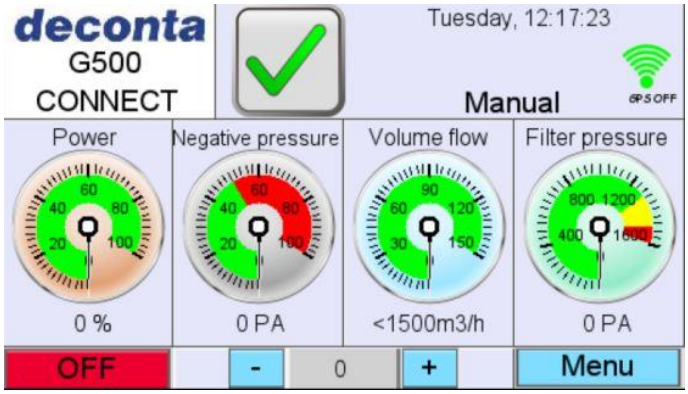
The alarm value for the filter pressure can be set continuously using the "-" and "+" buttons (yellow area in the display = filter must be replaced soon). The red area is a fixed factory setting.

**Stop dust sensor / Start dust sensor:**

- Switching the dust sensors on / off.

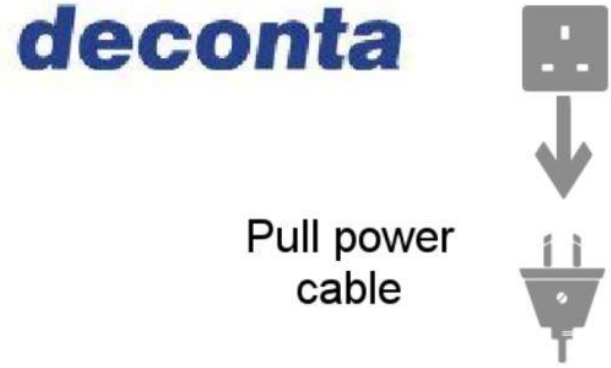
**HINWEIS** **The particle concentration in the exhaust air is not monitored when the sensors are switched off!**

### 8.7.13 Switch off the device



To switch off the device, tap the red "OFF" button

The appliance switches off and the mains plug can be pulled out.



# 9 Maintenance

This section contains information for the safe maintenance of the machine.

Maintenance comprises all technical and organisational measures during the life cycle of the machine that ensure the safe, economical and functional condition of the machine and prevent environmental damage.

## 9.1 Loss of warranty claims

The manufacturer's warranty is void in the following cases:

- In the event of modifications to the machine that have not been agreed with the manufacturer
- If maintenance is not carried out properly

## 9.2 Maintenance

Maintenance work, including changing/removing filters, may only be carried out by authorised persons wearing suitable protective clothing.

The appliance must be completely disconnected from the power supply for all repair and maintenance work.

**We expressly refer to possible additional regional and national regulations for the maintenance of the appliance technology.**

The ventilation systems (dust extractors, industrial hoovers and devices used for ventilation or negative pressure maintenance) must be serviced as required, but at least once a year, repaired if necessary and inspected by an expert. The test results must be presented on request.

**Devices with SRE connect control should be checked and calibrated once a year by deconta service.**

## 9.3 Warning of residual risks

**Contaminated filters may only be changed in compliance with all relevant safety precautions.**
**Only change filters when the appliance is switched off. Only use approved filters.**

**Do not use any residual fibre binders on the appliance.**

**Pull out the mains plug before opening the housing**

### 9.3.1 Personal protective equipment required

**Maintenance work, including changing/removing filters, may only be carried out by authorised persons wearing suitable protective clothing.**

## 9.4 Information on changing the filter

The frequency of the filter change depends on the degree of soiling of the filters. As the filter occupancy increases (filter soiling), the air performance decreases.

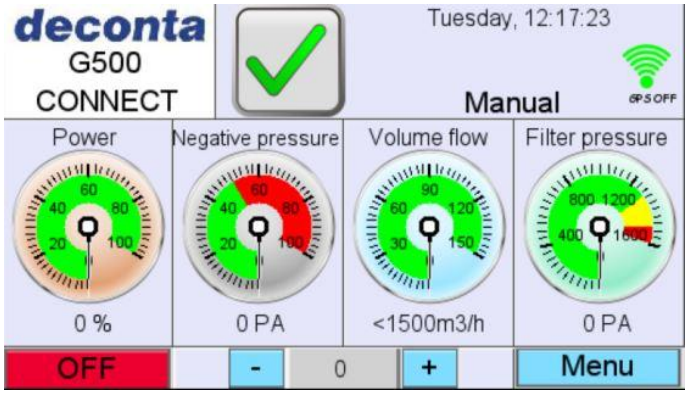
For filter monitoring during operation, a pressure gauge is fitted on appliances with SE control; on appliances with SRE connect control, the filter monitoring is shown on the display.

### 9.4.1 SE control unit

The following table shows the display values for a recommended filter change. If the display reaches this value, please replace the pre-filter first. If the display value drops by 100 Pascal or more, the appliance can continue to be operated. If the value drops by less than 100 Pascal, the HEPA filter must be replaced.

| Device | Recommended filter change for |
|---|---|
| S 400 | approx. 950 Pascal |

### 9.4.2 SRE connect control unit



To monitor the filter, the filter pressure is shown on the control unit display. If the display reaches the red area, please replace the pre-filter first. If the display value drops by 100 Pascal or more, the appliance can continue to be operated. If the value drops by less than 100 Pascal, the HEPA filter must be replaced.

## 9.5 Filter change

**GEFAHR**

**Contaminated filters may only be changed in compliance with all relevant safety precautions.**
**Only change filters when the appliance is switched off. Only use approved filters.**

**HINWEIS**

**Do not use any residual fibre binders on the appliance.**

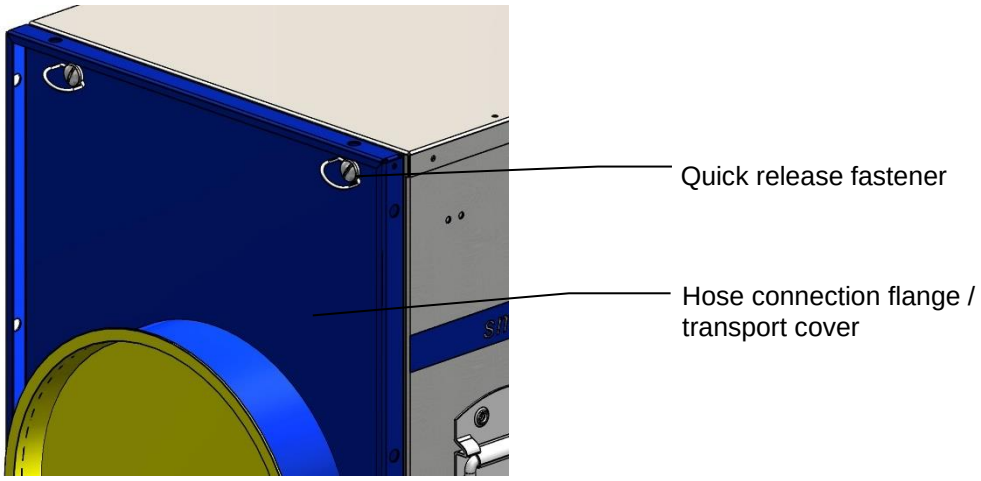
**Pull out the mains plug before opening the housing**

**Maintenance work, including changing/removing filters, may only be carried out by authorised persons wearing suitable protective clothing.**

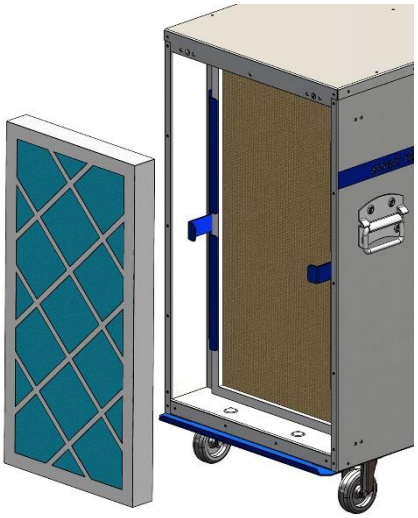
### 9.5.1 Procedure

- Release the quick-release fastener and remove the hose connection flange / transport cover.

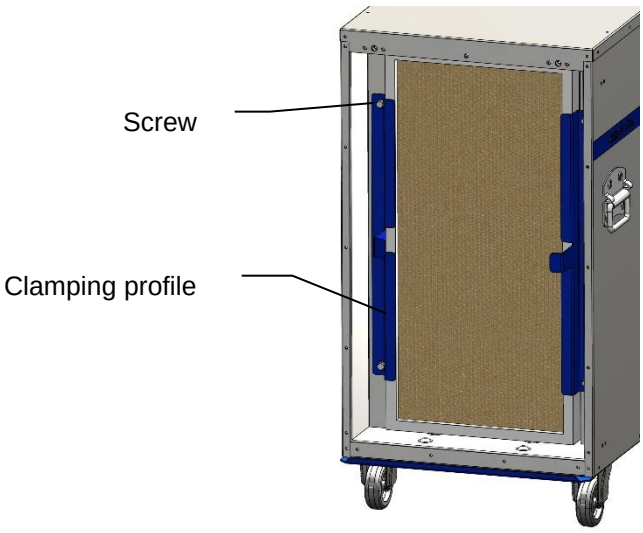
**HINWEIS** **Risk of crushing fingers when fitting / removing connecting flanges**



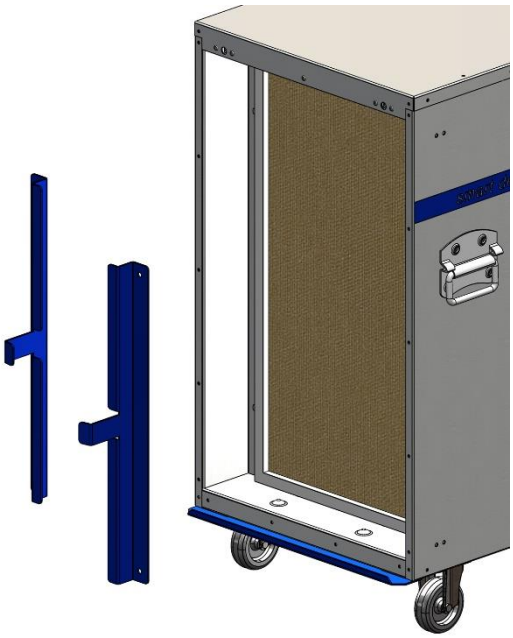
- Remove the pre-filter and dispose of it in accordance with regulations



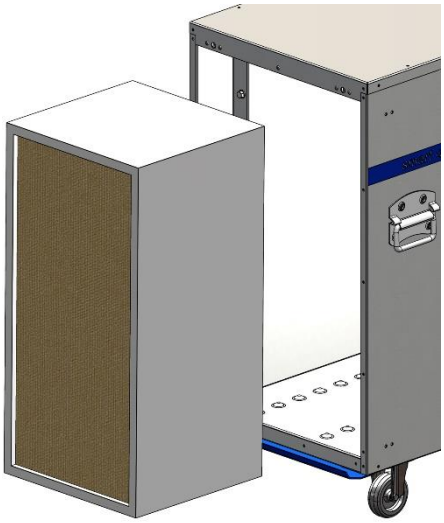
- Unscrew the screws of the clamping profiles



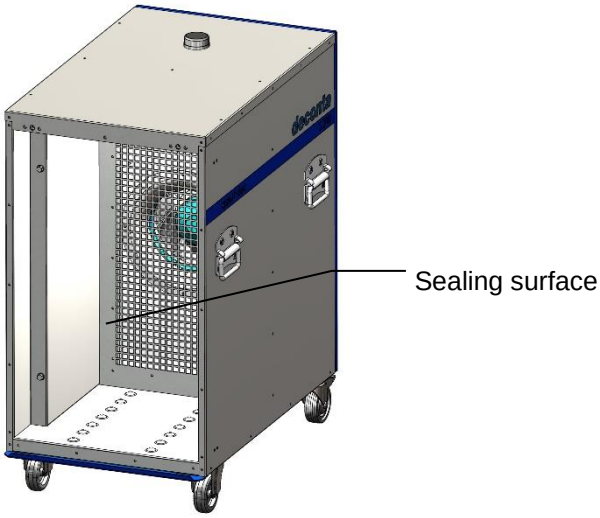
- Remove clamping profiles



- Remove the HEPA filter and dispose of it in accordance with regulations



- Check and clean the sealing surface on the appliance



- Clean the inside of the housing and insert a new main filter **in the centre**
- Insert clamping profiles and screws (tighten screws evenly)
- Insert pre-filter
- Fitting the hose connection flange

**HINWEIS**

**The appliances have only been tested with original deconta HEPA filters. To ensure machine safety, only original deconta filters should be used. If this is not observed, machine safety cannot be guaranteed. This may result in the unintentional and uncontrolled release of hazardous substances into the environment due to filter overload (leakage, filter tear, etc.).**

## 9.6 Troubleshooting and fault rectification

This section contains information on safe troubleshooting and fault rectification for the machine.

### 9.6.1 Possible faults and instructions for rectifying faults

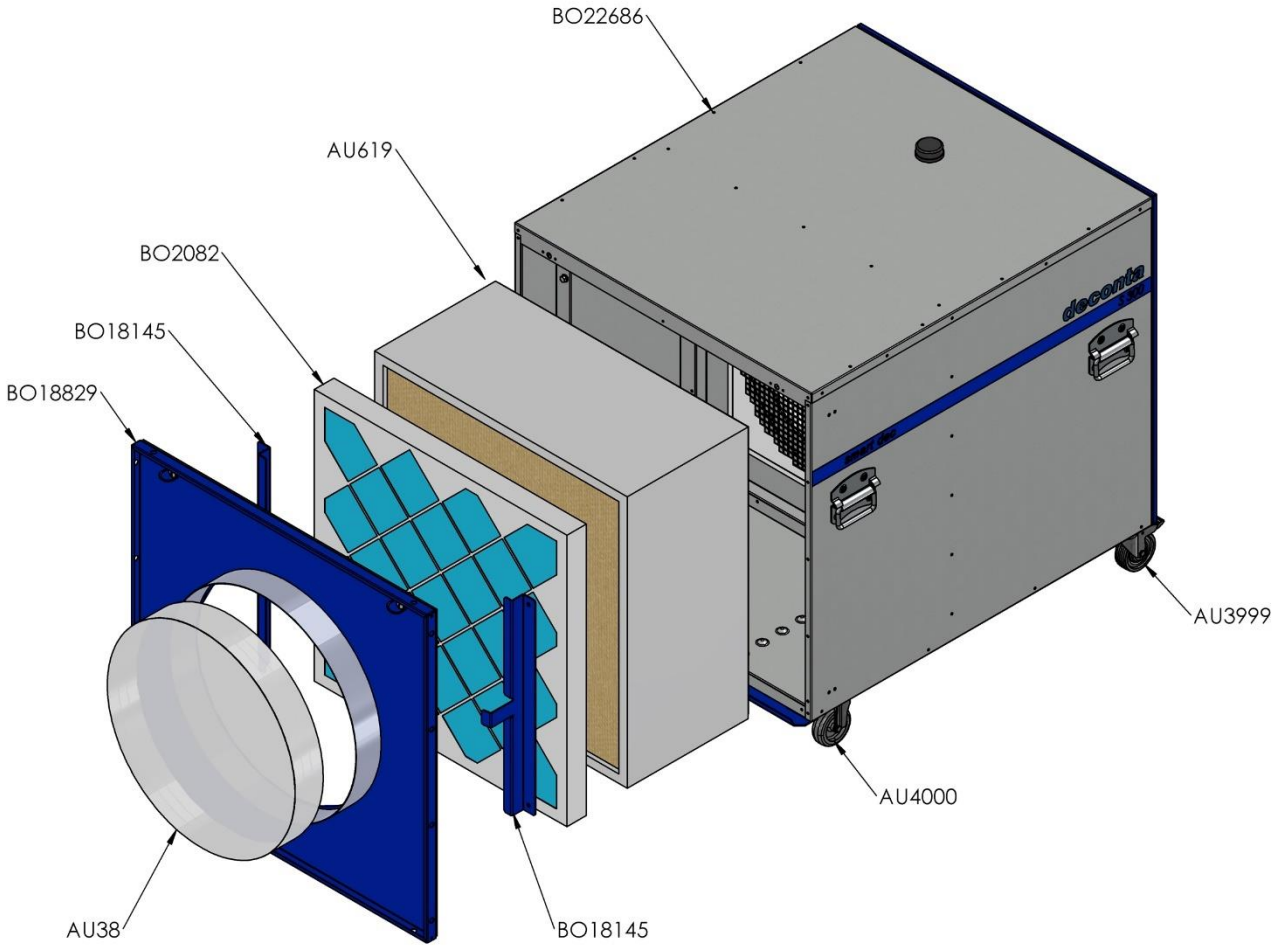
The following table provides an overview of faults and troubleshooting measures.

| Malfunction | Possible cause | Measure |
|---|---|---|
| Negative pressure too low | Pre-filter or main filter dirty | Change the filter as described under 9.5 described |
| Device does not work | Power source not in order | Power source inspected and repaired by a qualified electrician |
| Device does not work | Components on the vacuum holding device defective | Have the device repaired by deconta or a workshop authorised by deconta. |

# 10 Spare parts

Original spare parts should be used to ensure safe, trouble-free and economical use of the machine.

If this is not possible, the alternative spare parts should correspond to the properties of the original spare parts in order to ensure safe, trouble-free and economical use of the machine.



# 11 Storage

This section contains information on the safe storage of the machine.

The machine is stored in the following cases:

- After decommissioning for a longer period of non-use
- After decommissioning for a relocation

## 11.1 Ambient conditions

The machine can be stored under the following ambient conditions:

| | |
|---|---|
| Ambient temperature | 0 °C to +45 °C |
| Relative humidity | 70 % non-condensing |

## 11.2 Prerequisites

The following requirements must be met for storing the machine:

- Thoroughly cleaned (decontaminated)
- with fitted transport/sealing lid

**We expressly refer to possible additional regional and national regulations for the storage of the appliance technology.**

# 12 Waste disposal

Disposal is the capture, collection, transformation, selection, processing, regeneration, destruction, utilisation and sale of the materials to be disposed of that are used in the machine.

This section contains information on the proper and correct disposal of the machine.

## 12.1 Qualification of staff

Persons who dispose of the machine must fulfil the following requirements:

| Person | Required qualification |
|---|---|
| Disposer | Qualified waste disposal company for legally compliant, proper and professional disposal of the machine |

## 12.2 Legislation

The machine is disposed of in accordance with the legal regulations of the country in which the machine is disposed of.

The operator of the machine or the person authorised to dispose of the waste is responsible for compliance with these legal regulations.

## 12.3 Waste

The waste generated by the machine must be disposed of properly and professionally in accordance with the law.

# 13 EC Declaration of Conformity

The manufacturer / distributor

deconta GmbH
Im Geer 20
46419 Isselburg

hereby declares that the following product

| | |
|---|---|
| Product designation: | smart dec S 400 |
| Type designation: | 833, 842 |
| Serial number: | see type plate |
| Trade name: | Negative pressure unit smart dec S 400 |
| Year of manufacture: | see type plate |
| Description: | Negative pressure unit smart dec S 400 |

complies with all relevant provisions of the applicable legal regulations (hereinafter) - including their amendments valid at the time of the declaration. This declaration of conformity is issued under the sole responsibility of the manufacturer. This declaration relates only to the machine in the state in which it was placed on the market; parts and/or modifications subsequently fitted by the end user are not taken into account.

The following legal provisions were applied:

Machinery Directive 2006/42/EC
EMC Directive 2014/30/EU
Radio Equipment Directive 2014/53/EU
RoHS Directive 2011/65/EU

The protection targets of the following other legal regulations were met:

Low Voltage Directive 2014/35/EU

The following harmonised standards were applied:

| | |
|---|---|
| EN 60204-1:2018 | Safety of machinery - Electrical equipment of machines - Part 1: General requirements (IEC 60204-1:2016 (Modified)) |
| EN 61000-6-2:2005 | Electromagnetic compatibility (EMC) - Part 6-2: Generic standards - Immunity for industrial environments (IEC 61000-6-2:2005) |
| EN 62368-1:2014/AC:2015 | Equipment for audio/video, information and communication technology - Part 1: Safety requirements (IEC 62368-1:2014 (Modified)) |
| EN ISO 12100:2010 | Safety of machinery - General principles for design - Risk assessment and risk reduction (ISO 12100:2010) |
| EN ISO 13849-1:2015 | Safety of machinery - Safety-related parts of control systems - Part 1: General principles for design (ISO 13849-1:2015) |
| EN ISO 13849-2:2012 | Safety of machinery - Safety-related parts of control systems - Part 2: Validation (ISO 13849-2:2012) |
| EN ISO 13857:2019 | Safety of machinery - Safety distances to prevent hazard zones being reached by the upper and lower limbs (ISO 13857:2019) |
